

2019 ADHD QIDA Survey

New Patients with ADHD 31 to 90 days after beginning a stimulant (ages 6-18)

1. Was a follow up visit performed with 30 days following introduction of a stimulant?
What counts as a yes: A follow up visit was performed within 30 calendar days after the first RX for a stimulant was written?
2. Was a standardized instrument used for diagnosis of ADHD?
What counts as a yes: Documented use of a Vanderbilt, Connors, or other similar tool in the medical record.
3. Was a standardized instrument used for identifying co-morbidities?
What counts as a yes: Vanderbilts, Connors, or other similar tool from parent or school documented in chart that identify co-morbidities.
 - 3a. Were co-morbidities or the absence of co-morbidities documented in the chart.
What counts as a yes: Notation in the chart of co-morbidities (anxiety, depression, obsessive compulsive disorder, sleep problems, conduct disorder or others or a note that says no co-morbidities identified
 - 3b. Was a discussion of co-morbidities with the family documented in the chart:
What counts as a yes: Documentation in the chart that the co-morbidities were addressed with the family.
4. Is there documentation in the chart that a teacher completed a screen prior to diagnosis?
What counts as a yes: Use of a Vanderbilt, Connors, or other similar tool from a school/teacher documented in chart or written material from school about behavior or school performance.
5. Is there documentation that the family was screened for social determinants of health?
What counts as a yes: HEEADSS protocol, Social Hx, SEEK, SWYC or similar recorded in the chart. You do not have to include in the chart if there were any positives triggered for the family.
6. Did the patient have a well visit in the past 12 months?
What counts as a yes: Notation in the chart that a well child visit protocol was completed consistent with office policy within one year. An ADHD visit or evaluation does not count as a well child visit if the additional normal well child protocol was not completed.
7. Was the BMI greater than the 85%?
What counts as a yes: Documentation in the past year that the BMI was recorded at or over the 85th percentile.
 - 7a. Is there documentation that weight counseling was provided to the family?
What counts as a yes: Documentation that the patient was provided guidance on healthy eating and exercise habits.
8. Is the patient older than 13? (this is asked to determine if the patient is old enough to have received the HPV vaccine)
 - 8a Has the patient completed the HPV vaccines series
What counts as a yes: Has the patient received either 2 or 3 doses of the HPV appropriate to the guidelines of the vaccine protocol.
